EDUCATION

University of Waterloo

Bachelor of Software Engineering

Expected May 2029

- Cumulative GPA: 4.0/4.0 (Term Distinction awarded 1 of 1 terms)

SKILLS

- Programming Languages: C++, Python, Java, JavaScript, TypeScript, Verilog (Hardware Description Language)
- Frameworks & Technologies: Git, Agile Methodologies, Linux, React, Next.js, Docker, ROS 2, Tailwind CSS, GraphQL, Flask, SQL
- Machine Learning: PyTorch, Jupyter, Time Series Modelling, Predictive Modelling, Model Evaluation & Tuning

EXPERIENCE

Robotics Software Engineer

WATonomous (EVE Autonomy) ↗

Sep 2025 – Present

Waterloo, Ontario

- Developed concurrent robotics software in C++ using ROS 2 for autonomous vehicle systems
- Built and evaluated rapid-inference **predictive models** for external agent behavior to **reduce safety incidents by 3x**
- Collaborated in a cross-functional team to integrate perception, world modelling, planning, and action nodes
- Implemented unit tests with 100% code coverage to ensure software reliability in real-world scenarios
- Maintained **Docker-based development environments** to support reproducible testing and deployment

Senior Lecturer & Problem Setter

AYJ Coding Club ↗

Jun 2023 – Jun 2025

North York, Ontario

- Led bi-weekly lectures on algorithms and data structures for competitive programming to **50+ high school students**
- Authored original problems and automated **C++ graders** with **250+ total submissions** from students on the club's online judge

PROJECTS

Wundernn Market State Prediction ↗

Wunderlab ML Challenge

Oct 2025 – Dec 2025

- Designed a **Transformer-based time series model** for noisy financial sequences
- Outperformed the participant average (0.396 vs 0.309 mean R²) and placing **top 5% of 3000+ competitors**
- Evaluated sinusoidal vs learnable positional encodings, ultimately combining both to improve long-range dependency capture
- Trained and evaluated models locally on GPU with JupyterLab, iterating on architecture under compute constraints

Bucket (Student Dashboard) ↗

Personal Project

Nov 2025 – Present

- Built and deployed a full-stack student dashboard using React, Next.js, GraphQL (Hasura Engine), and PostgreSQL
- Launched and operated the platform for real users, reaching **40+ monthly active users** with **493+ created resources**
- Designed backend data models and **GraphQL APIs** to support course management, grade tracking, and real-time queries
- Implemented **Google OAuth** authentication and **Dockerized microservices** for local development and deployment

ezp2p (Peer-to-Peer Multiplayer Games) ↗

Personal Project

Jun 2024 – Dec 2025

- Developed browser-based peer-to-peer multiplayer games using **WebRTC Data Channels** with a frontend-first architecture
- Designed a modular networking library in **TypeScript** to abstract peer connections and game state synchronization
- Implemented deterministic game state updates with sequence-based ordering to ensure peer convergence without a central server

HONORS AND AWARDS

USACO Gold Division Promotion

Issued by USA Computing Olympiad (USACO)

Jan 2026

Certificates of Distinction in the Euclid, CSMC, & CCC (Sr. Div.) Contests

Issued by University of Waterloo Centre for Education in Mathematics and Computing (CEMC)

North York, Ontario

Jun 2025

Computer Science & Chemistry Excellence Awards

Issued by A.Y. Jackson Secondary School

North York, Ontario

Jun 2025
